PROFESSIONAL SUMMARY

Results-oriented **Project Leader** with over 10 years of experience in the SDLC, I have led high-performance teams at **Mercado Libre**. Expert in bridging the gap between complex business requirements and technical execution, leveraging a strong background in Software Engineering (Java/High-Scale APIs). Proven track record of delivering core product innovations—such as the "KITs Project" initiative—while optimizing team velocity through strategic automation and risk management. Adept at negotiating with stakeholders and guiding technical teams to deliver scalable solutions in high-concurrency environments.

CORE SKILLS

- **Project Management:** Agile Leadership (Scrum/Kanban), Roadmap Planning, Stakeholder Management, Risk Mitigation, SDLC Optimization, KPI Tracking, Delivery Management.
- **Technical Background (Non-coding):** High-Concurrency Distributed Systems, Microservices Architecture, API Design (REST), Java ecosystem, Cloud Infrastructure (AWS concepts), Docker.
- **Tools & Operations:** Jira, Confluence, n8n (Process Automation), Datadog/New Relic (Monitoring & Observability), GitHub.
- **Languages:** Spanish (Native), English (Professional Working Proficiency).

PROFESSIONAL EXPERIENCE

MERCADO LIBRE | Argentina Project Leader | Ene 2023 – Nov 2025

Leading a cross-functional squad of 9 (7 Developers, 2 Technical Leaders) responsible for critical Marketplace APIs with traffic peaks exceeding 20,000+ RPM.

- **Strategic Product Delivery (The "Kits" Project):** Spearheaded the end-to-end delivery of the "Product Bundles" feature, a complex initiative enabling sellers to combine inventory. Orchestrated high-stakes negotiations with Core Architecture teams to modify foundational entities, ensuring seamless integration while aligning UX, Product, and Commercial stakeholders.
- **Technical Strategy & Risk Mitigation:** Championed the development of a custom "Shadow Processing & Debugging Engine" to handle incidents in the high-frequency pipeline.

Overcame initial scope resistance by presenting a data-driven business case, resulting in a **70% reduction in incident backlog** and significantly faster Root Cause Analysis (RCA).

- **Operational Excellence:** Modernized the squad's operating model by restructuring Jira workflows and implementing **n8n and AI automations**. This initiative removed administrative bottlenecks (scheduling, documentation, ticket creation), increasing the team's coding bandwidth and delivery velocity.
- **Talent Development:** Mentored team members and facilitated technical decision-making, ensuring architectural feasibility for high-traffic solutions while protecting the team from scope creep through strict roadmap prioritization.

Senior Software Engineer | Jul 2021 – Ene 2023

- Designed and implemented scalable backend services, focusing on performance optimization for high-traffic components.
- Transformed development workflows by optimizing CI/CD pipelines, reducing deployment times and improving code quality standards.
- Provided technical mentorship to Junior and Semi-Senior developers, facilitating their transition into productive contributors and preparing myself for future leadership roles.

Software Engineer | Jan 2020 – Jun 2021

- Maintained and evolved internal core components, ensuring stability during traffic spikes.
- Actively participated in code reviews and production incident resolution, developing a keen eye for architectural risks.
- Collaborated on the design of backend solutions, translating functional requirements into technical specifications.

Software Developer | Sep 2018 – Dec 2019

- Developed and maintained internal ecosystem components, ensuring adherence to coding standards.
- Engaged in early code review processes and assisted in the resolution of production incidents, building a strong foundation in system reliability.

EXO CORP | Argentina Software Developer | May 2017 – Sep 2018

- Developed and maintained technological products using JavaScript, Node.js, and Python.
- Conducted code reviews and produced technical documentation to ensure project maintainability.
- Managed database interactions using CouchDB and MongoDB within containerized environments (Docker).

EARLIER EXPERIENCE

- **Web Developer** | Fundación Conocimiento Abierto (Sep 2016 – May 2017)
- **Developer / Technician** | Administradora de Monederos Electrónicos S.A. (Mar 2015 – Mar 2016)

EDUCATION & CERTIFICATIONS

- **Introduction to Computer Science** | HarvardX (edX)
- **Introduction to Linux** | edX
